Date: _____

Simulation: Facial Expressions of Emotion

Are facial expressions of emotion culture-specific (i.e., the face looks different from culture to culture when the same emotion is expressed) or universal (i.e., the face shows the same display across cultures when the same emotion is expressed)? What arguments from the present tutorial could you use to make a case one way or the other?

1. Describe the procedure and the results of EMG studies briefly.

Experiment: Transfer of Emotions

1. What are the differences between James-Lange Theory and Cannon-Bard Theory in explaining transfer of emotion?

Live! Psych: Emotion Ch.11

2. Describe one of the studies that confirmed Schachter's Two-Factor Theory.

3. Click the experiment tab (blue), to complete the trials and write down your result:

Condition	Mood Score
Sad	
Happy	
Neutral	

4. Describe how your data compares with what Neumann and Fritz observed in their study.
